PROFILE

AI Engineer and full-stack developer specializing in LLM systems, Retrieval-Augmented Generation, and autonomous AI agents. Founder of an AI engineering platform (RealMind) shipping production-oriented inference and automation systems; builds end-to-end — from model integration and agent orchestration to deployed full-stack products. Seeking an internship to apply hands-on experience in LLMs, RAG, computer vision, and AI-driven automation to real-world engineering problems.

EXPERIENCE

Founder & AI Engineer — Virtual Factory AI (RealMind)

- Architect and ship AI-powered products end-to-end, including LLM inference workflows, RAG pipelines, and intelligent automation systems.
- Own the full product lifecycle — architecture, experimentation, deployment, and full-stack implementation — across a multi-project AI portfolio.

AI / Software Engineering Intern

- Developed and integrated AI-powered features across web applications using Python, REST APIs, databases, and modern frontend frameworks.
- Collaborated across the stack to ship production features connecting backend AI services to user-facing applications.

SELECTED PROJECTS

- RealMind AI:** AI engineering platform for intelligent inference, logging, and AI-powered workflows.
- IBVAP:** Intelligent Border Video Analytics Platform for AI-driven surveillance and video intelligence — built for Smart India Hackathon 2026.
- Civic-IQ:** AI civic intelligence platform for complaint prioritization, duplicate detection, and department routing.
- Jarvis:** Personal AI assistant for intelligent interaction, automation, and task execution using agentic tool-calling.
- Inference Logging Platform:** Built a logging system for tracking and analyzing AI model execution across production workloads.

TECHNICAL SKILLS

Languages	Python, JavaScript, TypeScript, C, SQL
AI / ML	LLMs, RAG, AI Agents, Generative AI, NLP, Machine Learning, Computer Vision, Prompt Engineering, Fine-Tuning (LoRA/QLoRA), Hugging Face Transformers, PyTorch, scikit-learn, Vector Databases (FAISS, Chroma, Pinecone)
Automation	Agentic Automation & Tool-Calling, LangChain/LangGraph, Workflow Orchestration, Browser Automation, Webhook & Event-Driven Pipelines, n8n
Backend	FastAPI, Django, Node.js, REST APIs
Frontend	React, Vite, HTML, CSS
Data	MongoDB, Firebase, Firestore
Cloud / Tools	Git, GitHub, Docker, Vercel, Render, Google Cloud, CI/CD

OPEN SOURCE & HACKATHONS

- Mumbai Hacks 2025** — Participated in the hackathon, building and exploring AI-driven solutions.
- Smart India Hackathon 2026 — Developed IBVAP, an AI-powered border surveillance and video analytics solution.
- Google Gen AI Academy Hackathon — Built and submitted an AI-powered prototype for evaluation.
- 20+ open-source contributions attempted — active GitHub participation across open-source projects.

EDUCATION

B.Tech in Computer Science & Engineering — JNTU

2025 – 2029

ENGINEERING FOCUS

BUILD AI-powered products	SHIP Full-stack deployments	EXPLORE LLMs · Agents · RAG	CONTRIBUTE Open source · GitHub
